

# Data Engineering Analyst

## Job Description

### The purpose of your role in Our Co-op

As a Data Engineering Analyst, you will support the development, maintenance, and optimisation of data pipelines that provide reliable data for business analytics and reporting. You will work closely with data analysts, scientists, and business teams to ensure data is accessible, accurate, and well-structured. This role offers a great opportunity for growth in a collaborative, data-driven environment.

You'll become part of a skilled, engaged, and diverse team, supporting our co-op in our collective vision to be the best at what we do in the East of England.

### The Team you are joining

The IT - Analytics Delivery Team plays a vital role in harnessing the power of data to drive business intelligence and decision-making. Through advanced analytics, data governance, and strategic reporting, we enable the organisation to optimise operations and enhance customer engagement.

### Things you need to know

This is a hybrid-working position which will require you to adhere to our hybrid working policy and procedures.

Please note that our working patterns are non-contractual. The advertised working pattern represents the normal working pattern for the role at time of advertisement and is subject to change.

### The skills we are looking for

- Communication
- Teamwork
- Adaptability
- Technical proficiency
- Customer focused

### Your reporting lines

#### Location

Wherstead Park,  
Ipswich, Suffolk, IP9 2BJ

#### Department

Central Office, IT –  
Analytics Delivery

#### Reports to

Senior Data Engineering  
Analyst

EMPLOYER RECOGNITION SCHEME

BRONZE AWARD

Proudly supporting those who serve.

# Data Engineering Analyst

## Job Description

### What you will be working on at Our Co-op

#### 1. Process Efficiency

- Assist in developing and maintaining efficient data pipelines for business analytics and reporting.
- Support data quality initiatives by monitoring data integrity and troubleshooting issues.
- Implement data automation workflows using tools such as Workato.

#### 2. Data Management

- Work with data warehouse technologies, particularly IBM Netezza, for efficient data management.

#### 3. Continuous Development

- Continuously enhance your data engineering knowledge and contribute to process improvements.

#### 4. Collaboration

- Collaborate with data analysts, scientists, and business teams to meet their data requirements.

#### 5. Data Governance

- Ensure compliance with data governance, security, and privacy standards.

This job description sets out the major tasks associated with the stated purpose of this post. Minor tasks normally considered an integral function of this post will be undertaken and not excluded simply because they are not itemised.
